

Now available: The new book on

"Medical Low-Level-Lasertherapy: Foundations and clinical application"

(M. Weber, R. Weber, M. Junggebauer)

With more than 100 pages of detailed treatment protocols.

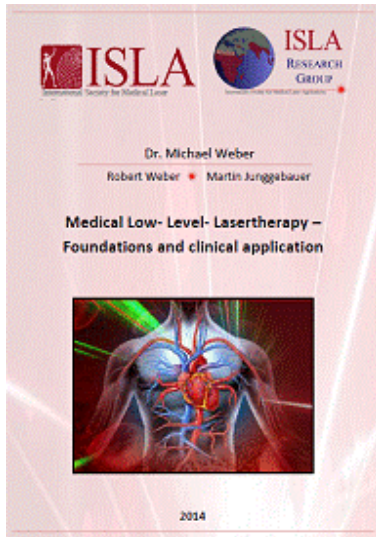

"This textbook provides an overview of the scientific foundations of medical low-level-lasertherapy on the one side and of the current state of clinical research on the other side. Furthermore, specific treatment techniques and protocols of low-level-lasertherapy are presented in detail to provide useful advice for clinical practice."

Content:

- Foundations and basic knowledge of medical low-level-lasertherapy
- External lasertherapy and laserneedle acupuncture
- Transcranial lasertherapy
- Interstitial and intra-articular lasertherapy
- Intravenous lasertherapy
- Photodynamic (tumour) therapy
- Dermatology and skin rejuvenation
- Weight loss („body contouring“)
- Lasers and stem cell therapy
- Detailed treatment protocols (general rules regarding intensity, choice of wavelength (colour), treatment duration etc. as well as specific protocols for different indications)

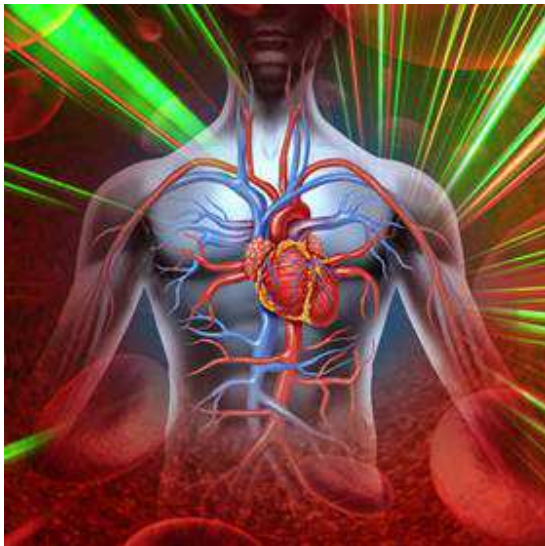

“An important bridge between traditional academic medicine and modern laser medicine“.

Price: 180 € (plus transport costs)*

*The whole revenue is given to the research projects of the ISLA Research Group.
